About Mazza Recycling

Family-owned Mazza Recycling is a New Jersey-based waste and recycling services provider with a reputation as a leader in sustainable waste management. Since it was founded in 1964 it has expanded operations to include a 55-acre commercial trash and recycling facility in Tinton Falls, a state-of-the-art Material Recovery Facility (MRF), and additional business lines such as Roll-Off, Mazza Scrap Recycling and Mazza Mulch. These diverse operations cater to both residential and commercial customers across several New Jersey counties.

Challenge

Old-fashioned manual billing systems and siloed business data were ineffective for this fast-paced rapidly developing company. Mazza Recycling was hampered by poor visibility and needed tools and technology that could keep up with trends in the dynamic waste services industry.

Solution

Mazza Recycling chose AMCS software because it offered an efficient, comprehensive solution combining Enterprise Management, Fleet Maintenance, Smart Dispatch, and Inspection technologies amongst others.

Results

AMCS software underpins Mazza's commitment to sustainability, which is evident through its diverse services including single-stream recycling, construction and demolition debris disposal, scrap metal recycling, and even mulch production from natural materials.

Poor visibility into key data

With its many diverse lines of business, Mazza Recycling needed a holistic view of how the company was performing across various lines of business. Prior to implementing AMCS software, the company had:

- Siloed/manual billing systems
- Poor visibility into key and real-time financial data
- Difficulty in managing contracts and pricing structures
- Inefficient reporting capabilities

Instant visibility increases productivity

To simplify business processes, the accounting team at Mazza selected AMCS's all-in-one platform, able to provide both customers and team members with pertinent information surrounding each account. The AMCS reporting, bill pay, autopay, and customer portals in particular have increased productivity and transparency, without the need for excessive manual entry and monitoring.

Focus on safety, reliability and innovation

By offering a wide array of services, from roll-off and front-end dumpster rentals to scrap metal processing, Mazza helps communities and businesses manage waste more effectively while minimizing their environmental impact. Their leadership in the industry is strengthened by their focus on safety, reliability, and innovation, making a positive difference not only through business operations but also in the local communities they serve.

This customer-centric approach, facilitated by AMCS software and coupled with Mazza's vast expertise in the waste industry, ensures that they continue to be a trusted partner for waste and recycling solutions.

Creating new revenue streams

One of Mazza Recycling's key milestones was the launch of its "Second Nature" bagging plant in 2023, which produces high-quality mulch bags. Thanks to composition analysis of the materials coming in from various business lines, Mazza was able to invest in a new facility to turn waste into additional revenue streams, highlighting the company's dedication to sustainability and the circular economy.

“

The AMCS reporting, bill pay, and customer portals drive productivity and transparency, eliminating the need for manual work and constant monitoring.
