

AMCS BULK HAULING

three ways AMCS offers more value

If you're looking for a robust, proven, and reliable transport management system (TMS), there are three core criteria to consider when researching vendors and the solutions they offer:

Flexibility

Many logistics technology providers focus their solution capabilities on just one commodity, leaving you to find multiple solutions for the rest.

AMCS's Bulk Hauling solution gives you powerful, flexible logistics software that remains scalable – no matter what materials you haul. We cover a variety of commodities with our cloud-based system, offering an extensive, standard solution right out of the box. This reduces time spent implementing additional commodities, leaving your bottom line unaffected and ready to grow.

Stability

Tech startups can seem like an attractive avenue to explore because they may offer lower pricing upfront to increase their market share, but growing pains inevitably lead to an imbalanced customer service experience, affecting your day-to-day operations.

We recognize that transparency and reliability play key roles in overall satisfaction.

With over 30 years in the industry, we have gained the experience needed to provide our partners and customers with the most reliable platform available. When you call the AMCS customer support line, your call is answered by real people, in real-time, every time.

Service

Many companies say they provide customer service after the sale, but it can be difficult to get in contact with them.

Our Customer Experience team provides exceptional service based on the following guiding principles:

- Our highest priority is to satisfy our customers through well-managed delivery of valuable software
- We provide a strong onboarding experience as the foundation of our ongoing partnership with our customer
- We value clear communication and transparency over being "right"
- We place importance on customer collaboration over adherence to written plans
- We champion our customers' success as our own of repair. Claims are automatically created, managed, and reconciled.
