

steer your trucking company with AMCS Bulk Hauling

logistics without barriers™

Keeping up with the modern transportation landscape is a business imperative for a thriving company. Technological advances are rapidly progressing, and so are customer demands for fast, accurate, real-time data.

Barriers to business performance are common and often hide in plain sight. And you need to identify and address them before they become larger issues.

That's where AMCS Bulk Hauling (formerly Qv21 Technologies) comes in.

Fleet logistics technology is a powerful tool that streamlines your operations, identifies logistical blockers, and powers more efficient fleets.

Common barriers

- Missing or incorrect tickets
- Poor implementation
- No real-time visibility
- Hours, invoicing, and payroll

AMCS Bulk Hauling quick stats

- Established in 2009
- 24/7/365 United States customer support
- Cloud-based SaaS solution
- 98% same-day ticket resolution rate
- Start load dispatching in one week

Let's dive into each barrier and how to overcome them.

Barrier 1: missing or incorrect ticket information

Paper tickets are antiquated, let's leave them behind.

Paper tickets often lead to lost or incorrect data, due to personnel errors or delays in reaching back-office personnel. This inefficiency is resolved with our e-ticketing modules, streamlining processes and ensuring real-time data accuracy.

Barrier 2: poor implementation

Half-baked implementation and onboarding are hurting business.

Ineffective logistics technology providers fail to resolve issues in a timely manner, leaving you overwhelmed. A reliable transportation management system (TMS), like AMCS Bulk Hauling, offers tailored onboarding and training to meet your unique business needs.

Barrier 3: driver-dispatch guessing game

Back-and-forth chatter across multiple channels makes it difficult to communicate.

Without GPS tracking and proper dispatch tools, you're operating with one hand tied behind your back, relying on manual methods that slow operations. Real-time visibility with tools like the GeoTrack Module in AMCS Bulk Hauling and dispatch boards improve your fleet management.

AMCS Bulk Hauling is a comprehensive transportation management system that connects and drives more efficient fleets.

Barrier 4: data capture and data reporting dislocation

Disjointed front and back operations are slowing you down.

Disconnected systems for Hours of Service, invoicing, and payroll create logistical roadblocks. Using a unified solution, like AMCS Bulk Hauling, integrates these processes for seamless, centralized data across departments.

Start getting logistics without barriers

Make barriers a thing of the past. Our TMS is here to help you break down barriers and build a more profitable and efficient bulk hauling business.
