Simplify complex transport operations in real time with agile planning, full visibility, and enterprise-level route optimization.

Product overview

AMCS Fleet Planner is a smart, real-time route optimization solution that helps transport companies streamline dispatching and reduce planning time while cutting mileage, drive time, and CO₂ emissions. Designed for agility and control, it empowers businesses to improve service levels, reduce costs, and drive sustainability across distribution and collection operations in any industry.

Key features

- View and manage plans with intuitive route lists, digital maps, order banks, and Gantt charts
- Optimize transport incrementally from planning through execution and follow-up
- Re-plan in real time using live data, including new orders, updates, status messages, GPS, and vehicle telemetry
- Configure the system to match your specific business requirements
- Integrate seamlessly with existing IT systems using a service-oriented architecture
- Enable multi-user collaboration with real-time data sharing across all planning clients and servers
- Support multi-industry operations, including recycling, construction, retail, and energy
- Access the platform via a native browser-based web portal
- Extend functionality through a flexible plugin layer, including AI-powered UI and integration development
- Capture and analyze data for detailed emissions tracking and route efficiency reporting
- Leverage the latest AMCS optimization services
