

Recology

Pioneering sustainability and community impact

About Recology

For more than a century, Recology, headquartered in San Francisco, has been at the forefront of resource recovery and recycling. With over 4,000 employees serving more than 130 communities across California, Oregon, and Washington, Recology generates approximately \$1.5 billion in annual revenue.

As a 100% employee-owned company, Recology has helped redefine waste management by placing sustainability and community stewardship at the heart of its operations. Guided by its vision of a world without waste and its Waste Zero ethos, the company is dedicated to eliminating waste through innovative recycling, composting, and resource recovery solutions.

Recology sets a standard for purposeful leadership in the waste management and resource recovery sector by its efforts to advance waste reduction and recycling, protect the environment, and strengthen the communities they serve. By combining groundbreaking initiatives, a deep commitment to sustainability, and impactful community engagement, Recology demonstrates that achieving a world without waste is not just a goal; it's a reality in progress.

Challenge

As Recology continues to grow and evolve, they have identified a need for greater standardization and enterprise-wide visibility, consistency, and scalability across core operations. As they expanded across markets and services, differences in processes limited real-time insight and made coordination increasingly complex. They set out to modernize their technological foundation with a standardized, integrated platform to improve transparency, enable better decision-making, and support long-term growth.

Solution

Recology selected AMCS as a strategic partner because AMCS aligned with Recology's vision for a modern, integrated operating system. AMCS was already well advanced on that journey and demonstrated both the momentum and commitment needed to deliver the remaining capabilities at pace. Just as important, AMCS approached the partnership collaboratively, welcoming input and engaging in ongoing dialogue as AMCS Platform continued to evolve alongside Recology's needs.

Recology leverages AMCS for the following solutions:

- Platform
- Pay
- Portal
- Dispatch & Mobile

Results

With AMCS Platform, Recology gained access to consistent, quantifiable operational metrics around route performance, completion rates, sequence compliance, and time-based segments. This data enabled a more data-driven approach to business management, while supporting greater process standardization across operations and centralizing select administrative functions.

AMCS Platform

AMCS Platform is an enterprise-grade, AI-enabled SaaS solution that connects and automates end-to-end waste and recycling operations to boost efficiency and safeguard margins. It delivers real-time insights, industry-specific automation, and scalable workflows that streamline processes and reduce risk. Designed for growth, the platform empowers organizations to drive sustainability and unlock greater value across their entire operation.

“

AMCS provides a comprehensive industry platform that aligns with Recology's long-term strategic direction. They have been a reliable, collaborative partner as we advance a multi-year technology transformation to modernize operations across the organization.
