

CUSTOMER SPOTLIGHT

A. JANSEN B.V.

Turning mineral waste streams into certified products

A. Jansen B.V., a Dutch company, was established in 1971 by Toon Jansen. With the purchase of a second-hand loading shovel, he laid the foundation for today's flourishing family company comprising five divisions and seven branches. A. Jansen BV is one of the largest independent family-owned companies, supporting the construction industry with infrastructure services, recycling of mineral waste streams, its own concrete plants and transportation.

A. Jansen BV stands out from the competition: not only does it support a Net Zero circular economy, but it also operates as a circular company. It starts with ground and demolition work, road construction and remediation etc. On site, the waste streams generated during the work are separated after which they are transported to Jansen Recycling BV's two processing sites. There, the waste streams are subject to cleaning procedures, using thermal cleaning and extractive soil cleaning installations.

The products released after cleaning are inspected, certified, and used as sustainable substitutes for natural sand and gravel in the company's own concrete plants and concrete products industry. By offering these environmentally friendly alternatives to replace primary raw materials, A. Jansen BV is making a meaningful contribution to the circular economy and the environment, in collaboration with its partners.

Since 2018, Jansen has offered its customers the option of access to the ECI or EPB value of the concrete in each delivery.

A. Jansen BV's circular character is evident in its Legioblocks®; concrete blocks with recesses at the bottom and studs at the top, much like the toy version. The sustainable Legioblocks® are easy to stack without the use of any cement or fixing materials, making them ideal for temporary and permanent constructions such as retaining walls, storage boxes, partition walls, trench silos, salt sheds and industrial halls.

A Jansen bv

Key Challenge

As a thriving organization with multiple locations and business units, A. Jansen BV needs advanced, tightly integrated technology to accelerate business operations.

Manual data entry from one system to another can lead to errors and cost staff time. In addition, paper-based workflows slow down operations.

For waste stream registration, A. Jansen BV has been using AMCS' CLEAR system for years. When Jansen's management approached AMCS about upgrading their current CLEAR system, they found that the tightly integrated SaaS-based AMCS Platform - which provides one system with visibility across the entire operation - made more sense than upgrading the AMCS CLEAR system.

“ That’s the secret of Jansen’s success: using circularity to profit twice, once as a smart business and once as an ideal partner for the environment. ”

Peter van de Klundert
CIO, A. Jansen

Why AMCS?

AMCS offers a scalable, enterprise-grade, cloud platform purpose-built for waste, recycling and complex logistics. This powerful system is incredibly user-friendly, accessible via mobile devices, and provides users with a wide range of automated workflows, advanced reporting capabilities, and a lower total cost of ownership.

Switching to the AMCS Platform will provide A. Jansen with numerous advantages, including avoiding errors and manual data entry, enhancing IT security, reducing complexity in application management, as well as saving costs due to outdated infrastructure. Additionally, the Platform is designed to grow with the business, allowing the company to benefit from a Platform that will support their continued growth and success.

Making a Positive Impact

A. Jansen BV processes more than 1.2 million tons of inert waste streams per year, with 98.5% of these materials being processed into high-quality

certified construction and/or raw materials. With the aim to approach 99.9% circularity in the near future, the company is taking a positive step towards sustainability.

Join them in this journey towards sustainability: [book a demo or download our brochure](#) and experience how AMCS Platform can help you save costs and work more efficiently and sustainably.

AMCS Platform offers:

- Industry-specific solutions for the most complex challenges.
- An end-to-end integrated platform that covers your entire business operations.
- Deep insight into all your business activities.
- Standardization, optimization and automation of business processes.
- A secure and scalable Cloud architecture that adapts to your situation.
